PROFESSIONAL SUMMARY

Interactive developer and 3D artist creating browser-based games, educational simulations, 3D environments, and immersive XR experiences. Combines Unity, C#, JavaScript, Three.js, and WebGL development with modeling, texturing, rigging, and animation. Experience spans K-12 learning, virtual training, mobile AR, responsive interfaces, and browser performance optimization.

PROFESSIONAL EXPERIENCE

Augmented Reality Specialist / Interactive Developer

Stride K-12 | 2023 - Present

- Develop, maintain, and optimize interactive educational experiences using Unity, C#, WebGL, Three.js, and JavaScript across science, math, history, and language arts.
- Build gameplay mechanics, interactive UI, and browser integrations, including Unity-to-browser communication and responsive layouts.
- Create and integrate 3D environments and assets, connecting modeling, materials, animation, and interaction through browser deployment.
- Improve WebGL loading and performance through asset cleanup, texture and memory optimization, and performance profiling.
- Develop immersive experiences and mobile XR workflows using VR, AR, WebXR, and browser-based 3D technologies.

SELECTED PROJECTS

Interactive learning collections | Strider Voyager, Fun Factory, Mystic Manor, and history experiences. Browser-based science simulations, themed math and geometry games, and educational escape rooms.

3D and virtual training | Thermo Fisher Scientific Nunc Automatic Cell Factory Manipulator VR experience, medical training simulation, and HVAC career exploration. Interactive equipment and immersive procedural environments.

Web and AR experiences | Tropical Island interactive environment, AR Spider Robot, and AR Solar System. Three.js, WebGL, animated 3D assets, hotspots, particles, camera interactions, and mobile AR.

AI-assisted web development | AI Agent Intro and Balanced Bump. Interactive web content, responsive educational interfaces, and JavaScript tools created with AI-assisted workflows.

TECHNICAL & CREATIVE SKILLS

Development: Unity, C#, JavaScript, Three.js, WebGL, HTML, CSS, JSON, GSAP; gameplay systems, UI/UX, drag-and-drop interactions, audio integration, and responsive design.

3D production: Blender, Autodesk Maya, Substance Painter, Photoshop; hard-surface modeling, UV mapping, PBR materials, texturing, rigging, animation, and environment art.

XR and rendering: VR, AR, WebXR, Apple Quick Look, USDZ, GLTF/GLB, DRACO, OrbitControls, shaders, particles, interactive hotspots, and camera systems.

Optimization: Unity WebGL builds, loading performance, asset and texture optimization, memory management, and performance profiling.

EDUCATION

B.S. Animation & Game Development | Utah Valley University | 2023
Graduated Cum Laude
