PROFESSIONAL PROFILE

Interactive developer and 3D artist with 3+ years creating and supporting K-12 games and simulations at Stride. Combines Unity/C#, JavaScript and 3D production with VR experience in Unreal Engine Blueprints and standalone Meta Quest applications. Recent prototypes include Python-based AI game-building workflows.

PROFESSIONAL EXPERIENCE

Augmented Reality Specialist / Interactive Developer

Stride K-12 (contract) | Remote | Aug 2023 - Present

- Develop, maintain and optimize Unity/C# and WebGL learning experiences across science, math, history and language arts, including Strider Voyager, Fun Factory and Mystic Manor collections.
- Build gameplay, quizzes, drag-and-drop interactions, responsive interfaces and browser integrations, including Unity-to-browser communication and desktop/mobile controls.
- Create and integrate 3D assets and environments, connecting modeling, UVs, materials, rigging and animation to interactive experiences and browser delivery.
- Build Three.js scenes with animated GLBs, hotspots, camera controls, video, particles and shaders.
- Troubleshoot browser builds and improve WebGL loading and runtime performance through asset cleanup, texture and memory optimization, and performance profiling.

SELECTED VR, AR & AI PROJECTS

Thermo Fisher VR training | UVU senior team project. Modeled equipment in Autodesk Maya and contributed Unreal Engine 5 Blueprint interactions for a VR simulation of the Nunc Automatic Cell Factory Manipulator.

Standalone Meta Quest applications | Unity. Created private VR applications, deployed directly to Quest hardware and tested interactions on-device.

Mobile AR & browser 3D | Personal prototypes. AR Spider Robot and AR Solar System; Three.js/WebXR and GLB workflows for Android, with USDZ/Apple Quick Look for iOS.

AI game-builder prototype | Python / OpenAI Agents SDK. Built an AI-assisted workflow that turns written briefs into linked HTML/CSS/JavaScript mini-games; refined prompts, setup and generated gameplay.

TECHNICAL & CREATIVE SKILLS

Development & XR: Unity, C#, Unreal Engine 5 (Blueprints), JavaScript, Three.js, WebGL, HTML/CSS, WebXR, Meta Quest, Apple Quick Look.

3D production: Blender, Autodesk Maya, Substance Painter, Photoshop; modeling, UV mapping, PBR materials, texturing, rigging, animation and environment art.

Technical workflows: GLTF/GLB, USDZ, DRACO, shaders, particles, interactive hotspots, responsive UI, asset optimization and performance profiling.

AI prototyping: Python, OpenAI Agents SDK, API/tool integration, prompt-driven code generation and debugging.

EDUCATION

B.S. Animation & Game Development | Utah Valley University | 2023
Graduated Cum Laude
